

Podcasting provides a new medium to record and distribute audio information via the internet and intranet. Many organizations are now using Podcast technology to provide company news, improve training and increase employee participation.

Nintex Podcast Server provides organizations with a centralized, easy to manage solution to create, manage and distribute podcasts. Built on Microsoft SharePoint technology users create podcasts via an online easy-to-use interface visually enhanced with Microsoft Silverlight technology.

Organizations utilize Podcasting as a new way to improve communication, distribute information and record meetings and events.

*Tight integration with
SharePoint 2007*

*Sort and organize your podcasts
like a SharePoint library*

*Record your podcast through a
browser*
